Ferguson Township

USGS National Hydrologic Dataset

- Pond/Lake
- Swamp/Marsh
- Perennial Stream
- Intermittent Stream
- Riparian Buffers**
  - 35' Buffer
  - 65' Buffer
- Impaired Portion of Stream
- Floodplains
- National Wetland Inventory
- Municipal Boundary
- Currently Developed Land from 2000 Land Use

The National Hydrography Dataset (NHD) is a comprehensive set of digital spatial data that encodes information about naturally occurring and constructed bodies of water, paths through which water flows, and related entities. The information encoded about these features includes classification and other characteristics, delineation, geographic name, position and related measures, a "reach code" through which other information can be related to the NHD, and the direction of water flow. In addition to this geographic information, the dataset contains metadata and information that supports the exchange of future updates and improvements to the data.

The NHD is the culmination of cooperative efforts of the U.S. Environmental Protection Agency (USEPA) and the U.S. Geological Survey (USGS). Other organizations also contributed to the effort.

Photo taken from Linden Hill Road and used for examples below.
