Appendix A Invasive Plants

Invasive plants displace naturally occurring vegetation and, in the process, upset nature's balance and diversity. Invasive plants share the following characteristics:

- Rapid growth and prolific reproductive capabilities.
- Highly successful seed dispersal, germination, and colonization processes.
- Rampant spreading that takes over native species.
- Very costly to control.

In general, aggressive, nonnative plants have no enemies or controls to limit their spread. Those listed below are not to be planted in Halfmoon Township:

Botanic Name	Common Name
Trees	
Acer platanoides	Norway maple
Acer pseudoplatanus	Sycamore maple
