Habitats were identified by Hudsonia biologists through map analysis and aerial photograph interpretation, and as many locations as practicable were field-verified. The map is suitable for general land-use planning, but is not suitable for detailed planning and site design, or for jurisdictional determinations. Boundaries of wetlands and other habitats depicted are only approximate. The Significant Habitats in the Town of Washington report prepared in conjunction with the map explains the habitat identification and mapping methods, describes the ecological significance of each habitat type, and offers conservation recommendations.
