APPENDIX B INVASIVE PLANTS

Invasive plants displace naturally occurring vegetation and, in the process, upset nature's balance and diversity. Invasive plants share the following characteristics:

- Rapid growth and prolific reproductive capabilities
- Highly successful seed dispersal, germination, and colonization processes
- Rampant spreading that takes over native species
- Very costly to control

In general, aggressive, non-native plants have no enemies or controls to limit their spread. Those listed below are not to be planted in the Interchange Overlay District:
